ReportBot: from setup to daily use

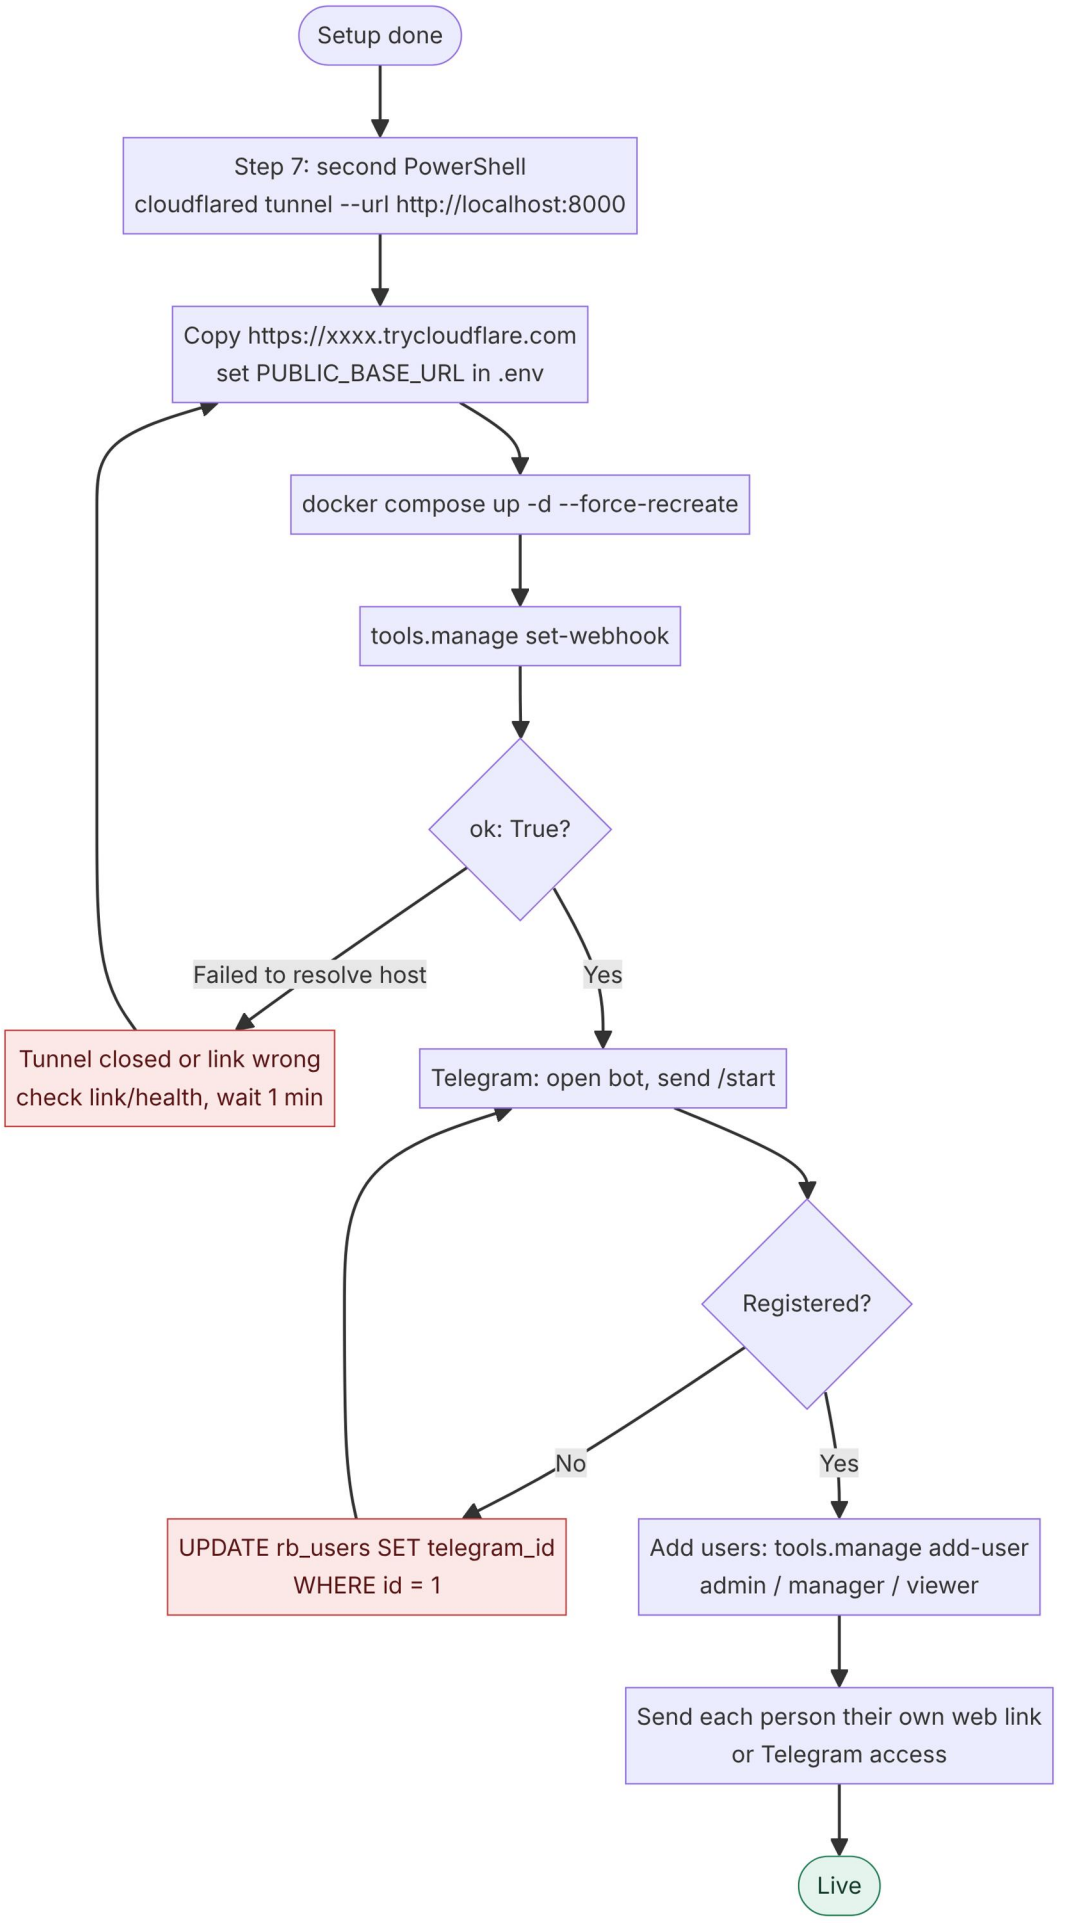

The whole journey for the Telegram and web report chatbot on MySQL with Claude, in four phases. Each step matches the numbered steps in the SOP.

SETUP | RUNNING | TEACHING REPORTS | PROBLEM / FIX

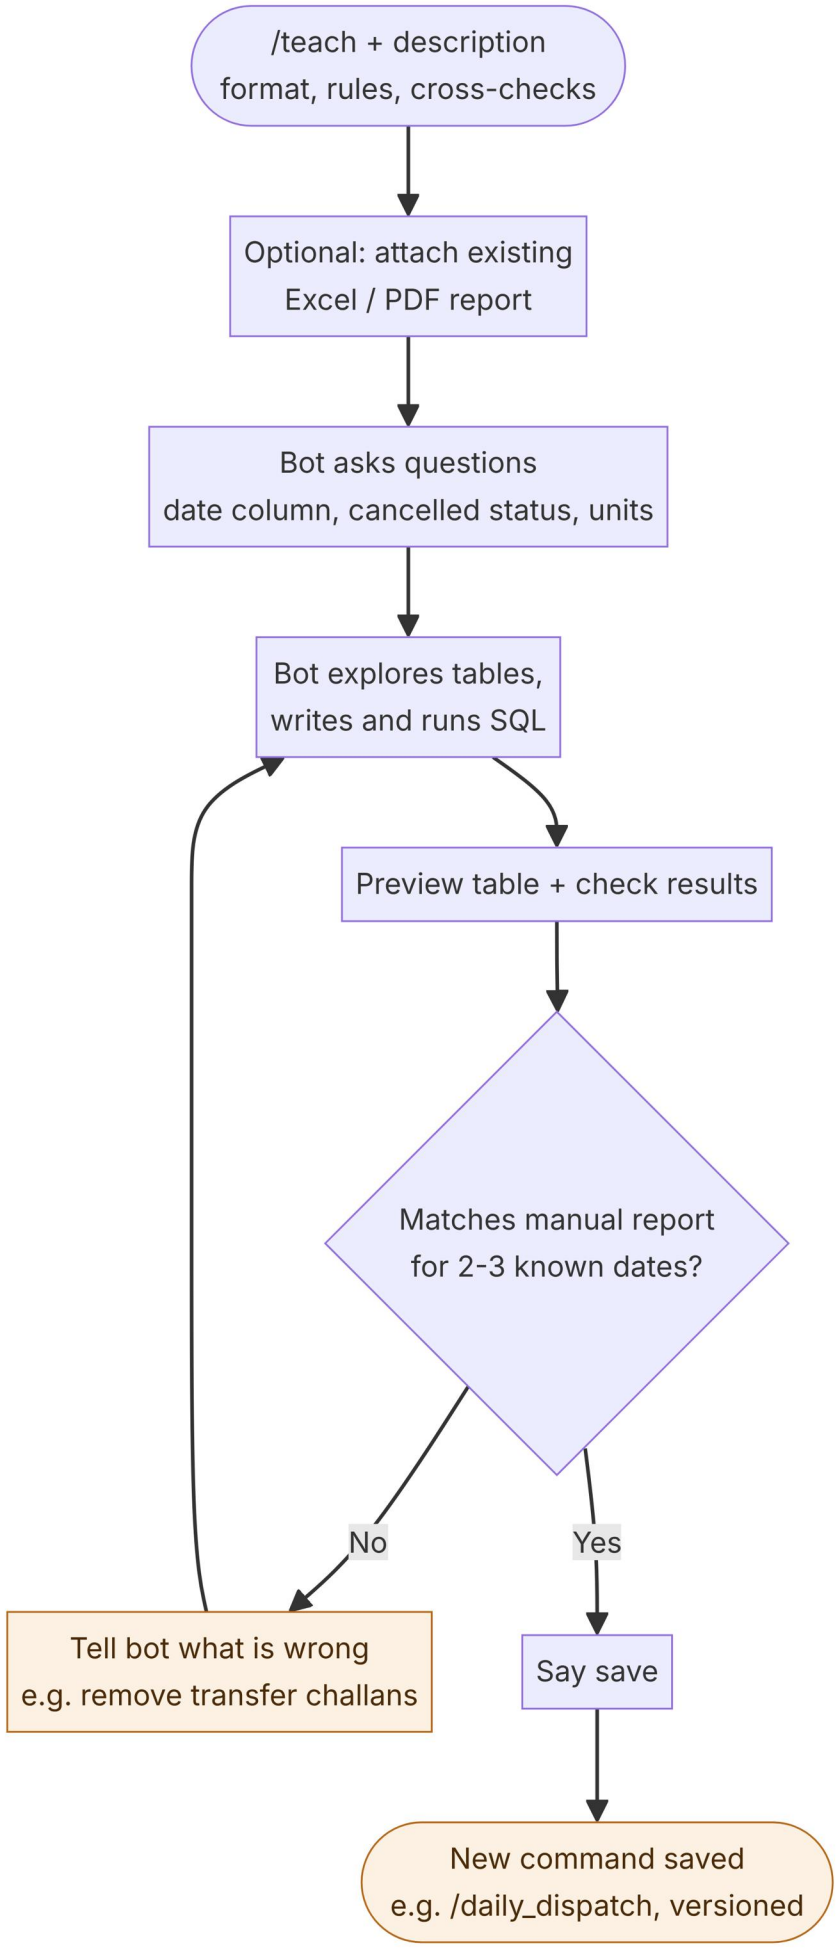

2. Go live: public link, Telegram and users

The tunnel gives the laptop an https address so Telegram and outside users can reach it.

3. Teaching a report

Managers and admins teach a format once; it becomes a /command anyone allowed can run.

4. Every request and every day

What happens when someone asks a question, and what to do after the laptop restarts.
